MESSAGE FROM THE RECTOR

Dear Students,

I would like to welcome all students to the 2016-2017 academic year here at Acıbadem University (ACU) School of Medicine. ACU is one of the most exceptional medical schools, while also being one of the youngest, in Turkey. The diversity of programs and unique learning experiences offered at our medical school prepare students to be successful physicians who respect patient rights and adhere to ethical principles of medical practice. We encourage self-directed learning which inspires students to acquire and apply their knowledge in an environment supported by professional mentors.

Our curriculum adheres to the highest professional standards. We train students to become physicians that deliver high quality patient-centered care.

This is accomplished, in part, by balancing the use of scientific method with biomedical and social/behavioural principles in the practice of medicine. Changing patient expectations and continuous developments in biomedical and information technologies are making it crucial for doctors to be capable in multiple fields in addition to their core expertise. The medical school consists of highly motivated and successfull experts in their respective fields. They are keen to develop both the medical and intellectual skills of our students. Not only quality of education, but also wholistic student support is always our top priority.

The carefully prepared core curriculum integrates basic and clinical medicine with international, multicultural, humanistic competency in theoretical and applied medicine. Examples of this are in-house Center of Advanced Simulation and Education (CASE) and our deeply integrated Clinical Medicine and Professional Skills (CMPS) and Medical English programs.

I personally find these changes in the field of medicine exciting and dynamic.

Once again I would like to welcome you to Acıbadem University and wish you all the best for a successful year.

Prof. Dr. Ahmet ŞAHİN

Rector

MESSAGE FROM THE DEAN

Dear Students and Faculty,

Welcome to a new academic experience at Acibadem School of Medicine! Acibadem School of Medicine proudly celebrated its second graduates in July 2016. Our first graduates are already in active duty in various residency programs, primary care and basic science settings. We wish all our graduates the best of luck and promise to remain home for all in the future. Many bright students have joined us this year. We welcome them to our family of nearly 500 students and 250 faculty members. We are all thrilled to see our students grow to become a body of learner-thinker medicine enthusiasts.

Acibadem University provides us world-class teaching and learning environments. Phase 1 (year 1-2-3) of our education takes place in Kerem Aydinlar Campus, while Phases 2-3 (Clerkships and Internship year) are in Acibadem Atakent and Maslak Hospitals.

Our unique curriculum detailed in this book is now well established and grounded. In this year's curriculum you will find basic science and clinical concepts integrated in a streamline. CMPS (Clinical Medicine Professional Skills) tract provides skills to become a lifelong researcher and cross-disciplinary thinker. It also provides the professional, ethical and social tools to the art of medicine. The clinical procedural skills applied using modalities in our Clinical Simulation Center (CASE) continue to expand. Bioinformatics, a new area in science is now fully integrated into medical sciences along with fundamental biostatistics. Finally, from this year on we will be promoting a new tract in our curriculum, namely "Electives in Medicine". These modules will be designed to guide our students in advanced levels in specific areas of personal interest.

2016-2017 Academic Year will be a year of refinement and fine-tuning. As always, we value your ideas and feedback.

It is a fascinating period to both teach and study medicine.. We are looking forward to enjoy learning along with you!

Best wishes,
Prof. Dr. Yasemin ALANAY
Dean

OUR AIM, MISSION and VISION

Our aim at Acıbadem University, School of Medicine is to train our students in accordance with the highest professional standards providing a broad range of scientific knowledge, practical and behavioral skills which will translate into high quality patient care and high level of scientific curiosity enabling him/her to make scientific research.

The physician at our focus is creative, competent and capable to collaborate with his/her colleagues and subordinates in order to provide the best health care at the institutional and global level. The student will learn how to learn and where to find the information when needed.

We aim to accomplish this goal by continuous medical education and self development that would assure the delivery of high quality medicine.

In this context, every graduate from our medical school shall be able to:

- Provide a high standard medical care to the patients (obtain an accurate medical history, perform physical examination, implement diagnostic interventions and evidence-based treatment protocols).
- Provide efficient care in medical emergencies.
- Apply biomedical, social/behavioral science principles, scientific knowledge and method to the practice of medicine.

Our mission

to create the physician, while who provides the best healthcare, is also committed to integrity, taking lifelong responsibility, mentoring and philanthropy .

Our vision

to be rated among the top medical schools in Europe with a nationally and internationally accredited education program reached the high universal standards.

In 2009, Acibadem University received an Erasmus Charter and signed a bilateral agreement with a number of highly respected universities in Europe. In 2013, Acibadem University renewed the charter according to the new regulations of Erasmus+ period (2014-2020). Acibadem University Medical School also had a chair on the Board of Directors for the Erasmus Intensive Program Project (IP) and was honored by hosting a project in 2011. Our students have benefited from the Erasmus Student Mobility Program and have traveled to the countries that ACU has bilateral agreements with. We have also been privileged to see the increase in number of incoming students to Acibadem University School of Medicine and to host them in our university and in Istanbul. Under the Erasmus Teaching Staff Mobility Program, faculty members from different countries, including The Netherlands, Germany, Belgium, Lithuania, and the United Kingdom have visited Acibadem University and have taught according to their individual specialties. Likewise, our own Professors in the Medical School and the School of Health Sciences have made use of the mobility program.

Acibadem University is a modern, dynamic, innovative and thematic university on health sciences. We value the Erasmus Exchange Program as a means to integrate with the contemporary world and aim to expand our list of exchange partners.

LIBRARY

Ayça MAZLUMOĞLU (Coordinator)

Çağdaş GEÇGEL (Librarian)

Öznur DAĞITMAÇ (Librarian)

Yusuf NAR (Library Staff)

The library facility in Acıbadem University welcomes both students and staff in the space of 1273-square meter, with 20 computers, seating capacity for 279 people, 11 group study and project study rooms and a cosy environment.

Resources on medicine and health sciences are classified according to the National Library of Medicine (NLM) Classification System, while Library of Congress (LC) Classification System is used for the resources in the general collection. All printed resources in the library collection can be searched through the library catalog and all electronic resources can be searched 24/7 through a single interface using EBSCO Discovery Service.

The library has approximately 13.000 of book collections and online access to about 25.000 e-journals and 1.175 e-books via Clinical Key, MEDLINE Complete, CINAHL Complete, EBSCHost, IEEE, Ovid, Science Direct, Taylor & Francis, Springerlink, Web of Science and Scopus databases. There are two branch libraries at the Atakent and Maslak University Hospitals in addition to Central Library. For more details about library resources, services and facilities please visit the library website: <http://library.acibadem.edu.tr>

GENERAL DESCRIPTION OF THE MEDICAL EDUCATION PROGRAM

The education is in English at Acıbadem University School of Medicine. Students who are admitted to medical school must pass the English Language Proficiency Examination or present equivalent proof of exam scores (TOEFL, etc.). Students who fail the exam should attend English preparatory class for one year.

The medical education program features three phases:

- » Phase I : Basic and Clinical Sciences (Years 1-3)
- » Phase II: Clinical Clerkship (Years 4 and 5)
- » Phase III: Internship (Family Medicine) (Year 6)

The education is based on an integrated curriculum. In this program, systems within the human body are described from the simplest unit, the cell, to more complex systems including pathologies, in subject committees. The term "Subject committee" means that topics of a given subject like "cell" or "organ systems" are described in a coordinated manner by different departments. These committees contain not only theoretical lectures but also practical studies and interactive modules.

In Phase I, groups of subject committees form a whole curriculum for a given year. In addition, there are special courses such as Clinical Medicine and Professional Skills (CMPS), Medical Informatics, Biostatistics and Medical Technologies, Interactive Modules, Medical English and Elective Courses.

Integrated programs within the subject committees provide equal participation of basic and clinical sciences to teach a particular organ system. For example; all aspects of gastrointestinal system are presented with the contributions of both basic sciences (such as

anatomy, physiology, biochemistry and microbiology) and clinical sciences (pathology, radiology and internal medicine) during the subject committee on gastrointestinal system. Thus, the courses include both basic information from basic sciences to clinical aspects of diseases such as pathology, diagnosis, treatment and prevention.

In Phase I, the curriculum consists of a total of 23 subject committees; distributed as 7, 8 and 8 in years 1, 2 and 3, consecutively.

In Phase I, interactive modules are conducted within the subject committees. The primary objective of these modules is to motivate students to acquire self-directed learning skills. In these modules, students work in small groups under the guidance of a tutor and analyze specific cases related to subject committee in an interactive fashion.

Clinical Medicine and Professional Skills (CMPS) is a three-year long interdisciplinary program of Phase I. This program is organized by different disciplines and comprised of four main tracks: Clinical and Communicational Skills, Health and Society, Research in Health, and Medical Ethics and Humanities. The CMPS program has been designed as an initial introduction to medical professionalism, providing a tool box of both knowledge and skills. The objectives of this program are to present basic professional skills and competencies of medical students, which are essential for good medical practice, and to enhance their personal and social development through fostering their intellectual skills and humanistic values.

A more detailed description of the CMPS Program can be found on the following pages.

Phase I also includes two important courses on Information Technologies, Biostatistics, Bioinformatics and Biomedical Technologies. Lectures of Information Technologies give insight into medical information processing such as coding systems and using of electronic patient records. Lectures of Biostatistics and Bioinformatics provide the basic tools for medical research; these disciplines help students to classify and evaluate the huge amount of scientific evidence and information produced every year around the world and sort out the relevant information for their own education and research. In the lectures of Biomedical Technologies, students are presented with the basic principles and state-of-the art information of medical diagnostic and therapeutic instruments, which need frequent updating of lectures due to overwhelmingly fast developments on their technologies today. Thus, these courses are expected to inspire innovative ideas in medical students which may bring up new approaches or discoveries in medicine.

Year 4 and Year 5 are the periods of clinical clerkships and include trainings inside the hospitals and primary care settings. Teaching staff of clinical departments supervise the students to work on a fulltime basis. This clerkship period focuses mainly on history taking, physical examinations and follow-up of patients as well as bedside practices, lectures and seminars.

Year 6 is the "Internship", or in other words "Family Medicine Period", and lasts for twelve months. Here, the students take the responsibility of patient care under the supervision of teaching staff. Clinical rotations are conducted in Internal Medicine, Surgery and Emergency Care, Paediatrics, Gynaecology and Obstetrics, Psychiatry and Public Health. The primary health care and community medicine perspective is incorporated in the training through clinical rotations in family health centres, community health centres and the outpatient clinics of the Department of Family Medicine.

EXAMINATIONS and GRADING SYSTEM

Each subject committee of Phase I feature two multiple choice type written examinations. The first exam is done in the middle of the Subject Committee and contains questions of lectures of the presented lectures. The second exam is conducted on the last

day of the subject committee, and contains questions from the lectures presented after the first exam. Exams may also be done for the laboratory lectures of some departments in the end of the subject committee. The Subject Committee grade is the sum of 50% of the first exam and 50% of the second, unless otherwise described in the Introduction Lectures of Subject Committees.

All students are supposed to attend the Final Examination in the end of the Curriculum Year. Final Examination consists of questions from all lectures presented during the year. Year grade of each student is calculated by adding 50% of the average of their Subject Committees to 50% of their Final Grade. If this total is 60 or more, the student is proficient to pass to the next grade; however, if the sum is below 60, the student should attend the Make-Up Examination, which also contains questions from the lectures of the present year. Again, the sum of the 50% of the average of their Subject Committees and 50% of the Make-Up exam should reach 60 for the student to pass.

CMPS courses have separate assessment plans and grading systems, according to their learning outcomes. At the end of each year, a final exam is held featuring all subjects given throughout the year. Students with the grades below 60 should attend Make-Up Examination of CMPS.

For years 4 and 5, students are graded according to their proficiency in written and/oral examinations as well as their professional skills gained during the clerkship. Assessment plans vary according to departments and declared in the introduction lecture of each clerkship period.

CREDITS

There are two types of credit systems: Local Credits and European Credit Transfer System credits (ECTS). One theoretical hour or two practical hours per week account for one local credit. At each committee, every 14 theoretical hours or 28 practical hours are assigned to one credit. ECTS credits are calculated according to the workload of students (featuring theoretical, practical hours and study time).

For further information, please consult the "Undergraduate Education" on the official website of the School of Medicine (www.acibadem.edu.tr).

CLINICAL MEDICINE & PROFESSIONAL SKILLS (CMPS) PROGRAM

Introduction and General Overview:

The CMPS program has been designed as an initial introduction to medical professionalism, providing a knowledge and skills-mix tool box for students during the first three years of medical education. It aims to facilitate basic professional skills and competencies necessary for good medical practice as well as, to enhance personal and social development, fostering intellectual skills and humanistic values. Combined with evidence based bio-medical knowledge, the CMPS program provides the students with all “sine-qua-non”* universal features of a contemporary physician, who is able to blend in with- and work in the benefit of any society and any health care system.

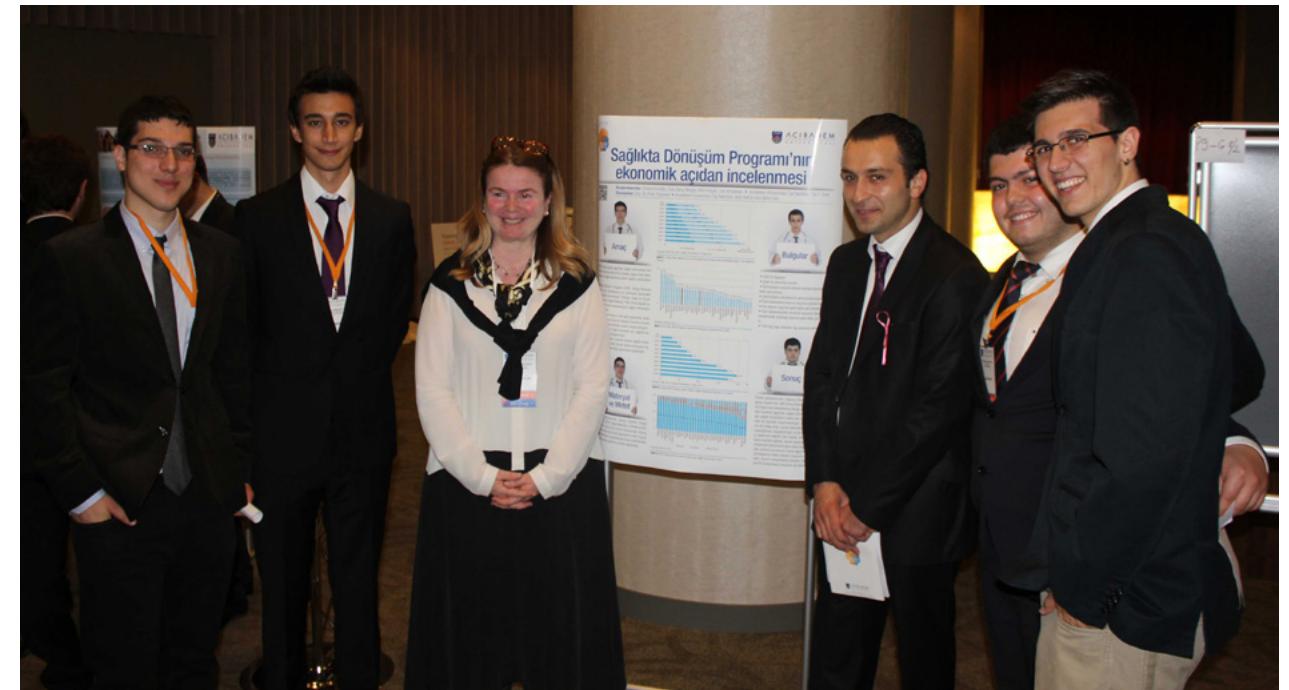

The CMPS program consists of four basic courses (**Communication and Clinical Skills, Health and Society, Medical Ethics and Humanities, Research in Health**) which will continue throughout the first

three years of undergraduate medical education, with a logical follow-up of themes building competencies to complement corresponding curricular topics of the accompanying subject committees. Furthermore, the program features an officially approved certificate course of “First Aid” in year I.

Facilitating effective communication along with scientific and creative thinking, paired with a humanistic approach, the CMPS program creates a solid fundament for a competent and compassionate physician who is aware of the professional responsibilities towards society (community orientation), the patient as a suffering person (communication skills and patient centeredness) and at the same time can attend effectively to the disease as a set of disordered biological processes (clinical problem solving skills paired with a holistic approach).

“Communication and Clinical Skills” Courses:

The “**Basic Communication Skills**” course in the first year aims to present an overview about the concept and tools of communication in general and their particular importance in the practice of the medical profession. In the “**Clinical and Communication Skills**” course within the second year, students are required to develop competencies for effective, culture- and case-sensitive, person-centered physician-patient communication fostering their personal and professional growth and complementing the practice based clinical curriculum. Furthermore, this course will provide the

students with opportunities to develop competency in history taking and physical examination techniques via simulated patient encounters and training on models, respectively. In the third year, the “**Advanced Communication Skills**” course will foster the students’ ability to master challenging situations requiring specific communication skills like difficult patients, breaking bad news, end of life issues and dealing with cultural diversity. Communication with colleagues (in a medical context) and communication of the physician with society in health education activities and public health campaigns, as well as, scholarly communication (communicating about scientific issues) is also dealt within this course.

“Medical Ethics and Humanities” Courses:

The activities within this interdisciplinary course will widen the students’ scope to perceive health as a human right and to develop a proactive responsibility for equity in health respecting bioethical principles. Implementing the range of traditional humanities disciplines—philosophy, history, literature, the arts—paired with ethics, sociology, law and behavioural sciences into this track, the CMPS Medical Ethics and Humanities courses will provide a creative learning environment which will enhance the development of intellectual skills along with the ability to recognize and solve medical and social problems. This course

also highlights the evolution of modern medicine from a historical point of view and provides a practice oriented learning environment to develop and incorporate ethical decision making skills into the process of clinical reasoning.

“Health and Society” Courses:

These courses will provide the students with opportunities to observe the relationship between health, ill health and political, environmental, societal and cultural factors in a community-based setting via early contact with patients and healthy individuals. The students will have the chance to observe and attend primary health care services within the Turkish health care system.

Furthermore, they are required to get an overview on health policy and health systems in different countries enabling them for comparisons.

“Research in Health” Courses:

These courses encompass planning and conducting a research project and presentation-publication of the results. Also, the students will gain an overview on evidence based medicine techniques and experience in critical appraisal by peer reviewing each others’ papers with the aim to complete scientific curiosity with an analytic approach and research know-how.

Finally, at the end of the third year, the CMPS program features a “**Comprehensive Medical Practice**” course, where the students will be required to combine basic skills and professional competencies gained during the previous three years to a comprehensive performance in their capacity as future M.D.’s in simulated “real-life medical encounter” situations.

Aims of the Program:

- ↳ to provide an overall introduction to the medical profession within an innovative and creative learning environment.
- ↳ to provide the link between Professional skills and competences, scientific knowledge, humanist approach and clinical practice of high ethical and clinical standards
- ↳ to facilitate the competence of scientific reasoning and to foster the attitude of self directed learning and life-long learning
- ↳ to contribute to the aim of undergraduate medical education to produce an efficient health care professional of high scientific and ethical standards (i.e. the physician as a good practitioner, good researcher, good manager, humanist and role model of integrity, honesty and probity)
- ↳ to provide community based educational opportunities for learning about social and economic aspects of ill health, health services in the community, and common health and related problems in the community.

Training and Learning Methods:

The CMPS program adopts a student-centred, practice- and community-based and experience based learning approach where the students will be required to actively involve in the learning process at all times. Blended teaching methodology with taskbased and problem-based learning, practical skills laboratory and simulated patient exercises, drama and role play, site visits, group assignments with presentations and discussions, reflective and peer group learning experiences, focus group sessions, literature analyses, and selfdirected learning sessions will be used.

Assessment and Evaluation Methods:

Evaluation methodology will be in accordance with the aims and learning outcomes, as well as, with applied teaching and learning methodologies. Log-books, standardized evaluation of group presentations of assignments and projects or performances, OSCEs (Objective Structured Clinical Examinations) oral and written examinations, structured observation reports, presentation of research projects-results at symposia and/or conferences, published papers, essays, structured feed-back forms will be used for assessment purposes.

LABORATORY FACILITIES

Multidisciplinary student laboratories

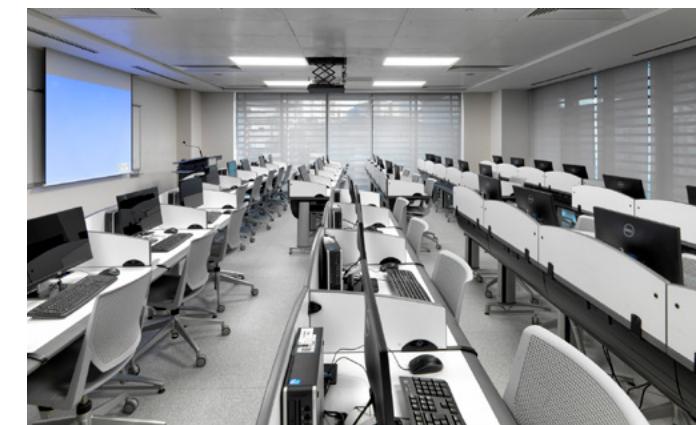

The School of Medicine houses various laboratories equipped with the latest technologies.

There are three multi-disciplinary laboratories, located at the third floor of the main building, with a total capacity of 120 students.

The laboratories are equipped with one microscope for every student, all other equipment needed for safety and application of practical courses of biochemistry, physiology, microbiology, biophysics, histology and pathology.

The laboratories are connected to each other by another laboratory where preparations for practical courses take place.

The video conference system connecting the laboratories enable students to follow the same instructions and demonstrations in different laboratories simultaneously.

Language and Computer Laboratories

A Language Computer Laboratory and three Computer Laboratories each having 40 computers. All Computers have high standard hardware and software systems.

Anatomy Laboratory

The Anatomy Laboratory features two cadaver for dissection and a rich collection of anatomic models for demonstration.

Anatomage

The Anatomage Table is the most technologically advanced anatomy visualization system for anatomy education which provides both real human anatomy, a wealth of pathological examples, and is available for our medical students.

**Dissection Laboratory**

Dissection laboratory is located at floor -1 offers a technologically-advanced environment that allows excellent basic, clinical and surgical anatomy training programs for students, assistants and specialists. All dissection tables are equipped with LCD monitors and tools to make every kind surgical operation possible. Fresh frozen and embalmed cadavers are used for the training sessions.

Research Laboratories

Acıbadem University Research Facility houses a spacious multidisciplinary laboratory as well as individual laboratories devoted to cell culture, molecular biology, microbiology, microscopy, flow cytometry and histopathology. A biosafety level III laboratory, a warm room, cold rooms, washing and sterilization rooms and stock rooms are located on the same floor. Our core facilities can be accessed by researchers at Acıbadem University as well as visiting scientists and collaborators from national /international institutions.

Our medical students are also encouraged to do research in collaboration with our academic staff.

CENTER for ADVANCED SIMULATION and EDUCATION (CASE)

Medical simulation has become a part of the medical education for the last 10 years as a result of the proven benefits of simulation in aviation and with the development of high fidelity medical simulators. Our University intends to educate the students with new training modalities such as blended learning, which combines e-learning, skills training and simulation based training programs. Before applying medical procedures on real patients, our students will be trained by using the medical simulators.

Director:

Mehmet Emin AKSOY, M.D., Ph.D., Assist.Prof.

The center for medical simulation and advanced endoscopic surgery training, CASE (Center for Advanced Simulation and Education), will be serving for undergraduate students and medical professionals to improve their medical skills, teamwork and crisis resource management abilities by using multidisciplinary training methods.

Our goal is being a regional leader in medical simulation by using these innovative educational strategies.

Vice Directors:

Dilek KİTAPÇIOĞLU, M.D., Assist.Prof.

Feray GÜVEN, M.D.

Erhan SAYALI, M.D.

CASE has three main units:

I. Clinical Simulation Laboratory (4th floor)

This unit is available for the following courses:

- ↳ Anaesthesia
- ↳ Emergency Medicine
- ↳ Nursing Care
- ↳ Internal Medicine
- ↳ Pediatrics
- ↳ Family Medicine
- ↳ Cardiology
- ↳ Pneumonology
- ↳ Otolaryngology
- ↳ Obstetrics&Gynecology

II. Advanced Endoscopic Surgery Training Center (First basement floor):

Postgraduate surgical courses available for the following courses:

- ↳ General Surgery
- ↳ Neurosurgery
- ↳ Urology
- ↳ Cardiovascular Surgery
- ↳ Orthopedics
- ↳ Obstetrics&Gynecology
- ↳ Robotic Surgery

III. Dissection Laboratory

Cadaver based courses are available for

- ↳ Orthopedics
- ↳ Neurosurgery
- ↳ Cardiovascular surgery
- ↳ ENT
- ↳ Plastic Surgery

Course Aims	This subject committee aims to provide knowledge about the functional structure of a cell including its building blocks and organelles. DNA replication processes and cell division will be explained. Basic information about the origin of life, heredity together with flow of genetic information, molecular basis of genetic diseases, and principles of gene therapy will be described. Biology and genetics of human behavior will be discussed. Principles of chemistry, biophysics and biochemistry in medicine will be also defined.					

Learning Outcomes	By the end of this committee, the students will be able to: <ul style="list-style-type: none"> » review basic information and theories about the cellular organizations that constitute life at molecular level » summarize the history of DNA discovery and describe the structure of DNA and RNA » explain the concept of cells and define the cell at ultrastructural level » correlate and interpret organelle ultrastructure and its function » identify and compare the structural elements of different cells » explain the cell division process, identify and compare mitosis & meiosis » recognize the gene organization, structure and function » explain the basic concepts of heredity » explain biological process of DNA replication and recombination process » classify DNA damage and identify DNA repair mechanisms » explain the basic principles of DNA packaging, chromatin formation and maintenance » discuss control of cell cycle and molecular mechanisms of cell death including apoptosis and necrosis » describe the basic principles of flow of genetic information, transcription, RNA processing, translation, and also control of gene expression and epigenetics » explain the principles of clinical cytogenetics, patterns of inheritance, Mendelian and Non-Mendelian Genetics including population genetics » distinguish and define mutations and polymorphisms including classification of different types » explain the molecular basis of genetic diseases including chromosomal anomalies » recognize tools of molecular biology and genetics used in medicine » observe and isolate human genomic DNA and apply it on agarose gel » characterize genetics of cancer cells and state the importance of oncogenes, tumor suppressor genes and two-hit hypothesis in cancer » discuss pharmacogenetics and explain basic principles of gene therapy with examples » summarize the biology and genetics of human behavior » indicate the connections of biophysics with other branches of science » give examples to important contributions of biophysics to medicine » define atom, element, molecule and matter » describe the properties of different types of bonds » explain the basic laws of one and two-dimensional movements and also define the physical units and measurements » describe acids, bases, salts, ionization and pH » recognize metals and non-metals in living organisms » classify bonds and properties of inorganic and organic compounds » explain concentration units and important analytical calculations and role of functional groups in medicine » explain the importance of radioactivity in medicine » define chemical reactions of important organic molecules in medicine and effects of these molecules in living organisms » give an outline of endogenous organic compounds in the body » summarize the techniques in organic chemistry, such as separation and purification » explain the basic principles of medical biochemistry » describe the structure and nomenclature of carbohydrates, proteins and lipids and their physiologic significance » acquire basic laboratory skills including microscopy and pipetting

Course Aims	The aim of this committee is to lay the grounds for understanding the structure of biological macromolecules, the physical and functional properties of the cell membrane, transport mechanisms, cellular homeostasis, metabolic pathways within the cell and cellular signaling, using an interdisciplinary and molecular approach. Basic concepts of electricity and thermodynamics will be presented. The high energy compounds in the living systems and the metabolism of proteins, carbohydrates and lipids and enzymes will be explained. Topics of mitochondrial genome, recombinant DNA technology and the human genome project will be discussed.

Learning Outcomes	<p>By the end of this committee, the students will be able to:</p> <ul style="list-style-type: none"> » define homeostasis, name the major homeostatic functional systems of the body and state reactions to maintain homeostasis » describe the structure of biological membranes and their components » indicate the properties and functions of membrane proteins » describe the physical principles of movement of molecules across membranes » review signaling mechanisms within and among cells and basic principles of specificity for receptors and messengers » list properties of electric charges, insulators, conductors » define Coulomb's Law and use formulae in solving problems » describe the electrical potential due to point charges and electric dipole » name factors that affect the resting membrane potential » describe basic principles of transport of molecules and ions across membranes using energy » explain the generation and phases of the action potential » describe propagation of the action potential by passive spread » describe the units of electric circuit and its properties » acquire knowledge on the flow of energy in nature and the laws of thermodynamics » describe concepts and principles relating to the second law of thermodynamics. » explain the resting state electrochemical potentials and Nernst equilibrium potential of the membrane » illustrate how energy yielding reactions are driven » discuss the concept of Gibbs free energy and thermodynamic properties of water » describe the structure, mechanisms and regulation of enzymes » describe the energetics of glycolysis and oxidative phosphorylation » describe endergonic and exergonic reactions and identify the oxidation and reduction in biochemical reactions » recognize the structure and function of ATP and other high energy compounds, and describe the relationship between ATP and the work carried out by the cell » define membrane potential and explain its role in ATP synthesis and thermogenesis » summarize glucose transport, transporters and transport mechanisms » describe TCA cycle and its regulation » describe the structure and function of glycogen, metabolic pathways for its synthesis and degradation » describe the mechanism for counter regulation of glycogenolysis and glycogenesis » explain and discuss metabolic pathways » state the properties of the mitochondrial genome and inheritance, define mitochondrial disorders » explain the basics of recombinant DNA technology and its diagnostic and therapeutic implications » discuss the aims and outcomes of the human genome project and its implications in medicine » define the principles of organization of simple and complex genomes, exemplify disease conditions » define in general the functions and locations of the human organs

Assessment Methods	Projects, Homeworks and Exams
Course Aims	<p>The first part of the course aims at introducing basic statistical concepts, descriptive statistics, statistical figures, basic statistical distributions, sampling, hypothesis testing, correlation and basic regression analysis. The course also aims at providing basic programming concepts of R language, data manipulation and analysis using R, usage of functions with R and also analysis of medical data with R.</p> <p>The second part of the course aims to provide necessary background for carrying out basic bioinformatics research. It aims to convey algorithmic solutions to core problems in biology and medicine. It also aims to stimulate medical students to look at the common problems they will be dealing with from different perspectives.</p>

Learning Outcomes	By the end of this course, the students will be able to:
	<ul style="list-style-type: none"> » describe basic statistical concepts » apply descriptive statistics » apply sampling methods » state building and carrying out the hypothesis testing » make use of correlation and regression analysis » use R language » test for statistical analysis using R » use graphics functions in R » analyze real medical data analysis with R » define impact of mutations » analyze local, semi global and global sequence alignments and interpret the results » perform Fast database search » obtain genome sequences using fragment assembly » design physical mapping of DNA » perform Phylogenetics analysis » build DNA and protein sequence profiles and use them in relation to disease diagnostics » define state of the art bioinformatics databases, tools and servers

Course Aims	The aim of this committee is to provide knowledge about cellular components and the histological features of different tissue types in the organism. Biochemistry of specific tissues will also be explained. The physiology of basic systems of the body and the neuronal signaling mechanisms will be discussed. The gametogenesis and an introduction to embryology will be explained. In addition, the general structure and different types of microorganisms will be explained. The anatomy of upper and lower bones will be provided. Students will also be informed on the philosophy and methodology of interactive learning modules and will be oriented to problem-based learning by an interdisciplinary module related to the subject committee.					

Learning Outcomes	By the end of this committee, the students will be able to: <ul style="list-style-type: none"> » define the histological structures, including extracellular matrix and cellular components, of different tissue types such as epithelium, connective, bone and cartilage, muscle, nervous tissues, skin and adnex and make correlations between their functions » describe the process of the gametogenesis, maturation of the sperms and oocytes, outline the processes of fertilization and implantation » distinguish the morphological features in bilaminar and trilaminar embryonic stages, explain the neurulation and early development of organ systems » describe the histological features of placenta, the developmental stages of yolk sac and its derivatives » describe the induction mechanisms in embryology » explain the embryonic, extra-embryonic and adult stem cell types » acquire knowledge concerning the congenital anomalies that occur during developmental process » state three major levels of information processing in central nervous system (spinal cord level, subcortical level and cortical level) » define neurotransmitters and state mechanisms that regulate the duration of the neurotransmission » define neuromuscular junction and describe the sequences of events occurring at the neuromuscular junction following a stimulus » define the synapse, name its components and the sequences of events occurring at the synapse following a stimulus » define excitation and inhibition of nerves, and their effect on capability of neurons to generate action potential » discuss the role of autonomic nervous system in maintenance of homeostasis » explain the main visceral functions of sympathetic and parasympathetic systems » describe the basic structure and function of cytokines, hormones and immunoglobulins » define the biochemical properties of epithelial, connective, adipose and nervous tissues » discuss and present disorders of carbohydrate metabolism in small groups » observe clinical chemistry laboratories in small groups » classify various microorganisms with their basic structural properties » demonstrate upper and lower extremity bones » recognize, prepare, and argue about interdisciplinary module

Course Aims	The aim of this committee is to provide knowledge especially about the anatomy, histology and physiology of the nervous and endocrine systems and also sensory organs, eye and ear. The development and biophysical principles of main sensory organs will be explained. The human body skeleton will be described. The basic principles of human psychology and behavior will be discussed.					

Learning Outcomes	<p>By the end of this committee, the students will be able to:</p> <ul style="list-style-type: none"> » demonstrate vertebral column, ribs, sternum and skull bones » describe the major parts of the central and peripheral nervous system, and explain their functions » explain the microscopic and macroscopic features of the nervous system » define the anatomy of the eye, its extrinsic muscles and ear » describe the histological features of sensory organs and development of eye and ear » explain the morphology and physiology of the endocrine glands » define and apply geometric optics in human vision » describe G-protein coupled receptors and sensory receptors » explain receptive fields and retinal processing » describe biophysics of photoreception » demonstrate the electrooculogram » explain the mechanical properties of auditory system and the frequency specific hearing » define content and transmission of information » outline the physical and chemical stimuli converted to cellular signaling in nervous system (concept of transduction) » explain the control mechanisms » define and examine biofeedback mechanism » explain and distinguish voluntary reaction and reflex response to a stimulus » define receptor potential, receptive field and lateral inhibition mechanism » define perception concept » list tactile receptors and explain the mechanism of tactile sensation » explain the somatosensorial pathways and functions of somatosensory cortex » explain the basic mechanism of hearing » describe the structure and function of vestibular apparatus » explain the mechanism of color vision, visual pathways and the processing of visual information in central nervous system » define the role of limbic system in behaviour and motivation » describe the neurophysiologic components of central nervous system which have effect on stress » describe human psychology and behavioral sciences » explain the history of behavioral sciences and discuss body and mind relationship » explain theories of psychopathology » define personality, temperament, attention, memory and learning » describe the stages of psychosocial development » explain emotions, cognition, motivation, stress and biology of sleep

Educational Methods	Site visits, group assignments, group presentations and discussions, reflective and peer group learning experiences, interactive lectures and self-directed learning sessions					
Assessment Methods	Written examination, log-books, standardized evaluation of group presentations of assignments and projects, performances, case studies, interactive lectures and self-directed learning sessions.					
Course Aims	This course aims to; Health and Society: » Introduce the students to the social, cultural economic and political factors of health and illness and to acquaint them with the primary health care system in Turkey. Research in Health: » create a learning opportunity for students to develop scientific thinking skills and to introduce the students to medical research methodology					

Learning Outcomes	At the end of this session, students will be able to: Health and Society: <ul style="list-style-type: none"> » discuss sociological concepts of health, illness, sickness and disease <ul style="list-style-type: none"> o identify the differences between illness, disease and sickness o compare and contrast the medical concept of disease with individual and/or community perceptions and explanations of health and illness/disease » explain the impact of medicine upon society <ul style="list-style-type: none"> o Labelling and stigmatization o Medicalization » explain the changing patterns of disease and health care throughout history and across cultures » explain the social determinants of health and illness <ul style="list-style-type: none"> o compare and contrast the theories of disease causation o define the socio demographic factors of health and illness » explain health issues in a global context » discuss the issue of social inequalities in health » explain the principle of equity in health care » explain the basic structure of the health care system in Turkey » make a field observation about the practice of primary health care Research in Health: <ul style="list-style-type: none"> distinguish between scientific philosophy and philosophy of science explain the evolution of scientific thinking describe fundamentals of scientific research and characteristics of scientific thinking methodology discuss the scientific reasoning and the methodological framework in a medical research describe the epidemiology and its context analyse the key criteria to assess if a relationship is causal

The background of the slide features a dynamic, abstract design composed of numerous thin, curved lines in shades of blue and white. These lines create a sense of motion and depth, resembling waves or energy flow. They are concentrated in the lower half of the slide, with some lines extending upwards towards the top right corner.

Course Date	19.09.2016 - 18.10.2016
Educational Methods	Theoretical and Practical Courses, Discussions, Seminars
Assessment Methods	Theoretical and Practical Subject Committee Exams, Homeworks, Presentations, Discussions
Course Aims	The main aim of "Cell and Tissue: Homeostasis" course is to provide necessary knowledge about the basic mechanisms of injury, haemodynamic principles along with response of the body and describe the general features of medically important microorganisms.
Learning Outcomes	<p>By the end of this committee, the students will be able to:</p> <ul style="list-style-type: none"> » gain knowledge about basic principles of physiology of the molecular transport systems and haemodynamic principles » distinguish types, sources and hazards of radiation » comprehend microbial metabolism and their pathogenesis in cells and tissues » classify sterilization and disinfection procedures » apply culture and microscopy techniques for identification of microorganisms » be able to define pathological response to tissue and cell injury, mechanisms of tissue repair » be able to explain and point out the importance of medical biology and genetics in medicine and define the molecular basis of genetic diseases » practice and review disease causing pathologies » review the basic concepts of nuclear medicine » evaluate different techniques of nucleic acid amplification and detection » comprehend different techniques like electrophoresis, chromatography and mass spectrometry for separation and analysis of molecules » comprehend the principles of image production by X-Ray

Course Date	07.12.2016 - 13.01.2017
Educational Methods	Theoretical and Practical Courses, Discussions, Seminars, Interactive Module
Assessment Methods	Theoretical and Practical Subject Committee Exams, Homeworks, Presentations, Discussions
Course Aims	The aim of this course is to provide an account of the histological, physiological, biochemical and genetic basis of the haematological processes with descriptions of the clinical and laboratory features and management of blood disorders.
Learning Outcomes	<p>By the end of this course, the students will be able to:</p> <ul style="list-style-type: none"> » define the basic histological, physiological, biochemical and genetic properties involved in haematological processes » describe the pathology which occurs when these normal processes are disturbed » explain the processes that protect our body from infectious agents » explain the clinical and laboratory features of common blood disorders and their management

Course Aims	The purpose of this course is to provide necessary knowledge about structure and function of musculoskeletal system. This system gives humans ability to move using the muscles and skeleton. The musculoskeletal system provides form, stability, and movement to the human body. It is made up of the body's bones (the skeleton) muscle, cartilage, tendons, ligaments, joints, and other connective tissue (the tissue that supports and binds tissues and organs together). The musculoskeletal system's primary functions include supporting the body, allowing motion, and protecting vital organs. In this committee students will be informed about all these structures, their diseases and treatment methods.
Learning Outcomes	By the end of this course, the students will be able to: <ul style="list-style-type: none"> » learn the muscles and bones at the ultrastructural level » make a correlation between muscle and bone ultrastructure and their function » learn the microscopic structure of bone and muscle » understand the biophysics of muscle contraction » learn the management of symptoms of functional impairment related to musculoskeletal disorders in primary care » understand the developmental & acquired abnormalities of the musculoskeletal system » learn the diagnosis and treatment of traumatic disorders of the musculoskeletal system » learn the pathologies of the musculoskeletal system at microscopic level » know pharmacokinetics and pharmacodynamic properties and mechanisms of actions of drugs used in prevention and treatments of musculoskeletal system related diseases/disorders » understand the physical rehabilitation of musculoskeletal system related disorders » comprehend the principles of image production by ultrasonography, computerized tomography (CT) and magnetic resonance imaging (MRI)

The background features a dynamic, abstract design composed of numerous thin, curved lines in shades of blue and white. These lines create a sense of motion and depth, resembling waves or light rays. They are concentrated in the lower half of the slide, with some lines extending towards the top left corner.

ELECTIVE in MEDICINE

COURSES AND PROJECTS

First Semester Elective Courses

(MED 251) Introduction to Medical Engineering

Hande Bayram, Assist.Prof.Dr. Faculty of Engineering

(MED 253) Introduction to learning and teaching

Levent Altıntaş, Associate Prof. Dr. Medical Education Department

(MED 254) Vulnerable and Underserved Groups in Healthcare

Yeşim Yasin, Assist. Prof.

(MED 257) Diversities

İnci User, Prof. Dr. Sociology

(MED 258) Computational ‘Omics’ Analysis

O. Uğur Sezerman, Prof. Dr. Biostatistics and Medical Informatics Department

(MED 259) All Aspects of Violence

Oğuz Polat Prof. Dr.

(MED 262) Introduction to Service Learning (Community Based Learning)

Güldal Süyen Prof Dr.Physiology Department

First Semester Elective Projects

(MED 291) Medical Research Projects

Tanıl Kocagöz Prof.Dr.

(MED 295) Social Research Projects

Fatih Artvinli, Assist.Prof.Dr.

Second Semester Elective Courses

(MED 250) Advanced statistical methods

Özgür Asar, Assist.Prof.Dr. Biostatistics and Medical Informatics Department

(MED 252) Potential Risks of the Hospital Environment

M.Emin Aksoy, Assist.Prof.Dr. CASE

(MED 255) History of medicine in istanbul

Fatih Artinli, Assist.Prof.Dr. & Yeşim Ülman, Prof.Dr.

(MED 256) Public Speaking

Levent Altıntaş, Associate Prof. Dr. Medical Education Department

(MED 260) Personalized Medicine

O. Uğur Sezerman, Prof. Dr. Biostatistics and Medical Informatics Department

(MED 261) Developing a social project plan:

Berrin Karadağ, Associate Prof. Dr.

(MED 263) Health, Illness and Medicine in Literature

Nadi Bakırıcı, Prof. Dr. & İnci User, Prof. Dr. Sociology

(MED 264) Biomedical Technologaes

Onur Karatuna, Asistant Prof.Dr.

(MED 266) Peace Culture

Ayça Kurtoğlu, Associate Prof. Department of Sociology

Second Semester Elective Projects

(MED 292) Medical Research Projects

Tanıl Kocagöz Prof.Dr.

(MED 296) Social Research Projects

Fatih Artvinli, Assist.Prof.Dr.

Course Date	26.10.2016 - 13.12.2016
Educational Methods	Theoretical and practical lectures, discussions, seminars
Evaluation Methods	Theoretical and practical subject committee exams, skills and performance based assessment
Course Aims	This course aims to provide an integrated knowledge about the development, structure and physiology of the nervous system and pathogenesis of the disorders related to this system. At the end of this course, third year students will gain knowledge about the signs and symptoms of nervous system disorders, neurological examination, related risk factors, prevention, diagnosis and principles of treatment.
Learning Outcomes	At the end of this course students will be able to <ul style="list-style-type: none"> » Explain the normal structure and function of nervous system » Explain the pathologic processes in neurological disorders » Describe the mechanisms of action of the nervous system related drugs » Define the risk factors related to neurological disorders » Describe signs and symptoms of neurological disorders, » Define the prevention of nervous system disorders, approach to diagnosis, principles of treatment » Take the history and make physical examination of neurological system

Course Aims	This course aims to provide necessary knowledge about technologies used in medicine for diagnosis and treatment. It aims to achieve this goal by giving information about the basic principles to which these technologies are based on and how these scientific principles are turned into diagnostic and therapeutic tools. It also aims to make students evaluate easier the results of medical tests obtained by the diagnostic instruments and stimulate thinking and discussing about developing these technologies and new application areas. This year's course also aims to apply the knowledge of bioinformatics and biostatistics obtained in previous years to various projects of medicine.

Learning Outcomes	<p>By the end of this course, the students will be able to:</p> <ul style="list-style-type: none"> » understand the principles of endoscopic systems used in the examination of respiratory, gastrointestinal and urogenital systems » describe the diagnostic and therapeutic applications of endoscopic systems » explain the scientific concepts that led to the development of imaging techniques like ultrasonography (US), echocardiography, computerized tomography (CT), magnetic resonance imaging (MRI) » understand the use of ventilators and other reanimation instruments » distinguish the similarities and differences between natural and artificial respiratory and circulatory systems » evaluate the results obtained by instruments like electrocardiography (ECG), electromyography (EMG) and electroencephalography (EEG) that measure the electrical activities of the systems and understand the relation between the electric signals and activities of various organ systems. » judge the differences and advantages between classical surgery techniques and robotic, stereotaxic and image-guided surgery » gain knowledge about radiotherapy instruments and their role in tumor treatment » compare the natural kidney functions to dialysis systems and artificial kidneys » understand how laser is used in therapeutic applications in medicine

Course Aims	This course aims to provide necessary knowledge about the Gastrointestinal System disorders, basic mechanisms of digestion, the development and structure of the digestive system organs, the metabolism of nutrients and related diseases. In this context the normal and abnormal functions of the GI system are discussed to make a basis for problem solving in clinical presentation, diagnosis, prevention and treatment of gastrointestinal and liver diseases.
Learning Outcomes	<p>By the end of this committee, the students will be able to:</p> <ul style="list-style-type: none"> » Explain the anatomy of gastrointestinal system. » Explain the physiology of gastrointestinal system » Explain the pathologic processes of gastrointestinal system and related organs in children and adults » Explain the molecular and genetic basis of digestive organ cancers » Explain the pharmacokinetics and pharmacodynamic properties and mechanisms of actions of drugs used in prevention and treatment of the endocrine system disorders. » Explain the pathogenesis, clinical signs and symptom and therapy of infectious gastroenteritis and food poisoning » Describe the epidemiology and prevention of food and water borne diseases » Explain the metabolism and transport of nutrients » Describe the gastric, intestinal, liver and pancreatic tests and the bilirubin mechanism » Name and indicate the etiologies and clinics of gastrointestinal diseases in children » Explain the prevention and management of digestive disease as a primary care provider » Name the imaging modalities and algorhytm of the gastrointestinal disease » Explain the clinical features, diagnostic approaches and treatment modalities of gastrointestinal disease

Course Aims	The aim of the course is to provide an integrated knowledge about the development, structure, genetics and physiology of the urinary system and male and female genital systems and evaluate the etiology and pathogenesis of the related diseases. We also aim to outline the general aspects of pregnancy, reproductive endocrinopathies, benign, and malign conditions of genital systems and point out the importance of urinary tract pathologies.
Learning Outcomes	<p>By the end of this committee, the students will be able to:</p> <ul style="list-style-type: none"> » Review the anatomy, histology and physiology of the male and female urogenital systems and pelvis » Assess and classify the pathologic changes related to urogenital disease. » Recognize the pharmacological properties of agents used for treatment of urogenital system disorders » Recognize the pathophysiology of urologic diseases and cardinal presenting symptoms, including symptoms related to urolithiasis, infection, and urologic malignancies, » Become familiar with the general diagnostic approach and various diagnostic modalities related to common urologic and gynecologic problems » Define etiological and risk factors of male and female urogenital tract infectious disease » Relate the main problems of obstetrics and gynecology from perspectives of Family Medicine and Public Health. » Describe the physiology of pregnancy and how to manage normal and high-risk pregnancies with introduction to genetic counseling » Recognize genetic basis of hereditary urogenital system and breast diseases » Explain how to approach to the patient with urogenital symptoms in primary care » Outline the principles of antenatal care and list routine tests of pregnancy » Describe early stages of development and physiological changes of pregnancy » Describe the physiology of normal labor and delivery » Describe physiological changes in the puerperium » Define methods of female contraception and explain their mechanism of action » Recognize basic principles of renal physiology and interpretation of renal function tests. Classify renal pathologies with emphasis on hypertension, renal failure and acid-base status. » Explain the anatomy and the classification of benign and malign conditions of the breast

Duration	10 weeks	
Aim	The aim of this course is to teach basic surgical topics to forth year medical students with lectures, problem based learning, paper presentations and bed side training. Each student expected to incorporate basic knowledge and clinical experience to obtain modern patient-oriented clinical care. During the course, the students will have opportunities to join out- and in-patient care with medical teachers and other health professionals.	

At the end of the course,

In General Surgery Department, students should be able to:

- » be familiar to anatomy of surgical sites
- » describe the symptoms and physical findings of patients with surgical disease, ,
- » analyze the signs and symptoms in a patient
- » outline the principles of managing surgical patients (acute abdomen, hemodynamic instability, hemorrhage, etc)
- » differentiate between benign and malignant / acute and chronic / emergent and elective surgical disease.

In Anesthesiology Department;

- » define fields of anesthesia and understand different methods of anesthesia
- » obtain basic knowledge and skills of establishing airway maintenance and vascular access
- » recognize basic principles of anesthetic management for various patients undergoing different surgical procedures in and outside the operating theater
- » become familiar with algology and critical care units
- » have the skills of applying basic and advanced life support according to international guidelines

In Cardiovascular Surgery Department;

- » understanding the diagnostic studies and indications for surgical management of CV diseases
- » recognize essential of the coronary bypass procedure and valvular heart surgery
- » recognize basic principles of surgical management of congenital cardiac malformations
- » become familiar with surgical management of thoracic aortic disease
- » explain early and late outcomes of the surgical management of adult and congenital heart diseases

In Plastic, Reconstructive and Aesthetic Surgery Department;

- » recognize the pressure sores, understand their underlying mechanisms, take necessary precautions for their prevention, offer treatment outlines
- » comprehend the range and limits of reconstructive surgery after oncologic resections of head and neck and breast cancer
- » make small excisional biopsies in skin lesions
- » be familiar with treatment algorithms in skin cancers
- » obtain adequate management skills in acute burn and frostbite injuries at emergency basis
- » recognize and differentiate vascular malformations
- » describe classification and treatment principles in cleft lip and palate deformities
- » recognize different wound types and describe management
- » recognize maxillofacial fractures at emergency basis
- » recognize acute hand injuries at emergency basis
- » manage referring of a replantation case to a specialized center
- » describe basic medical and surgical aesthetic procedures

In Thoracic Surgery Department;

- » Become familiar with major thoracic surgical pathologies and their treatment
- » Recognize thoracic surgical emergencies and the findings of thoracic trauma

Duration	10 weeks

Aim	The purpose of Pediatrics Clerkship, is to integrate knowledge, attitudes and skills already acquired in the first 3 years of medical school into the clinical discipline, follow-up of healthy children and practice current diagnostic and therapeutic approaches with guidance in common medical and surgical disease situations. Preoperative preparation, surgery and postoperative care (history, physical examination, laboratory, differential diagnosis) in children with pediatric surgical problems are discussed in overview. The principles of general surgery are discussed with emphasis on physiology of the pediatric population, especially in the neonatal period as a different model from those of adults. The necessity of a unique approach is underlined. Children with common congenital anomalies, surgical pathologies, especially those with associated anomalies requiring surgery are discussed focusing on treatment modalities. Students are encouraged to observe hospitalized children and outpatients, learn disease prevention, early diagnosis and treatment strategies and provide support for the patient and the family.
Learning outcomes	By the end of this clerkship, the students will be able to: <ul style="list-style-type: none"> » develop effective communication skills, oral and written, with peers on their medical team, parents, attendings as well as oral presentations skills in a variety of settings such as work rounds, patient consultations, family meetings, etc. » obtain a pediatric history from the parent and when appropriate from the child. » perform a complete physical examination on patients from infancy through adolescence » develop a clinical assessment and plan, demonstrating critical thinking skills and integration of previous basic science and clinical knowledge into management of pediatric problems. » explain growth and development of healthy neonates, children and adolescents including clinical follow-up » describe immunization practices and common morbidities in childhood, such as cardiac, endocrine, hematologic, immunologic, nephrological, neuromuscular, metabolic, infectious, neoplastic, genetic diseases.

A large, abstract graphic of wavy lines in shades of pink and white occupies the lower half of the page. The lines flow from the left side towards the right, creating a sense of motion and depth. They are rendered with a soft, painterly quality, with some lines being more prominent than others.

The background features a subtle, out-of-focus photograph of a landscape with green trees and a blue sky.

Aims	Case discussions, Patient reports recorded by students, journal club presentationDOPS (Direct Observation of Practical Skills)
	This course does not encompass all aspects of internal medicine, it is designed to provide the basic skills necessary to produce well-trained physicians. The interns are expected to be responsible for initial patient evaluation and selection of appropriate management strategies They are gradually encouraged to make independent management decisions on patients and are given guidance and closely supervised by an attending physician. At Acibadem University Hospital, the experience gained will mostly focus on acute medical illnesses prevalent in local population as well as a variety of patients at all levels of complexity referred to a major tertiary medical center from suburbs and other cities. The main aims of this program are; 1. To focus on the diagnosis and management of patients with acute and chronic medical disease under close supervision of faculty. 2. To become familiar with humanistic and ethical considerations involved in patient care. 3. To develop conduct and behavior appropriate for a medical professional.
Learning Outcomes	At the end of this program the interns will be able to; » gain the ability to use the basic concepts and principles to solve the clinical cases, » discriminate the pathological findings of diseases with a broad spectrum of pathologies including significant cardiovascular, pulmonary, hematologic, oncologic, gastrointestinal, nephrologic, endocrinologic, rheumatologic and infectious diseases. » obtain the skill of treatment of diseases with a broad spectrum of pathologies including significant cardiovascular, pulmonary, hematologic, oncologic, gastrointestinal, nephrologic, endocrinologic rheumatologic and infectious diseases.

Course Duration	(3+4) 7 weeks
Course Aims	A sixth-year medical student in the Acibadem University Medical faculty will generally select an elective “sub”-internship, where the student will perform the role of an intern or first year medical graduate, under the supervision of senior house staff and attending physicians.
Learning Outcomes	The rotation is generally pursued in the field appropriate to career interest. In this way, the student can experience a glimpse of their future career without the burden of full responsibility.
Assessment Methods	At the end of each elective rotation an Elective Assessment Report must be completed by the Elective Supervisor and returned as soon as possible to the Medical School Office of Acibadem University. If an Elective Assessment Report is not received the student is deemed to have failed the elective rotation.
Requirements	All Acibadem University Medical students must complete a seven-week clinical elective prior to graduating the faculty. This seven-week period can be separated maximum in three rotations. This allows the student to gain valuable “hands-on” experience in a clinical setting. An Elective Approval Form must be submitted to the School of Medicine providing details of the elective(s) that the student is applying for. The Dean of the Medical Faculty must approve electives prior to commencement. It is possible to complete an elective outside of Turkey.
